

Project: Belajar Bareng

Objective: To ensure that the Login and Add User features function according to the specified requirements and correctly handle both valid and invalid user inputs.

Scope: Login dan Add User

Features to test:

- User login authentication
- Login validation (required field and invalid credential)
- Session management after successful login
- Access control for authenticated users
- Logout functionality
- Open add user form
- Add user with valid data
- User data validation (required field and format validation)
- Duplicate username/passowrd validation
- Success and error notification messages
- Data persistence and display in user list

Exclusions:

- Edit User
- Delete User
- Update User
- Reset Password
- User Profile Management

Test strategy:

- Functional, security, and compatibility testing
- UAT with select customers

Resources:

- Team: 1 QA engineers, 1 Developer
- Tools: Google Chrome, Staging/Development Server, Excel/Jira

Risks:

- Network issues, inconsistent test data, and browser compatibility

Timeline:

- Week 1: Requirement analysis, Test plan preparation, Test case development
- Week 2: Execute Login feature testing and report defects
- Week 3: Execute Add User feature testing and report defects
- Week 4: Bug fixing, retesting, and regression testing
- Week 5: Test Summary report and final sign-off

Deliverables: Test cases, execution reports, defect report and final test summary

Success Criteria:

- 100% pass on high-priority test cases
- Zero critical bugs
- Login and Add User features meet the specified functional requirements

Environment:

- Dev and staging server, Google Chrome and Microsoft Edge browsers, Windows 10/11 operating system, and Stable internet

Documentation: Test Plan, Test Cases, UI/UX Design (Login & Add User Page), Defect Reports and Final Test Summary Report
